Class Materials

This category groups the materials and resources available for the classes. These materials include reading files, audiovisual materials, writing files, and multimedia files that the teacher can assign to students.

To assign available products, you need to:

- **Select Units:** Choose the corresponding units by clicking on the selection box assigned to each unit. This step is essential to ensure that the products are assigned properly.
- **Assign Select Content** Once you have marked the relevant units, click on the "Assign Selected Content" option.
- **Record Assignment Information:** After selecting and assigning the units, a window will open where you will enter the information for the assignment you are creating. In this window, the following details should be provided:

  - **Title:** Assign a title to the assignment. The title should be clear and concise so that students can easily understand what the assignment is about.
  - **Instructions:** In this field, provide specific instructions that students should follow when completing the assignment. It is essential that the instructions are clear and understandable to avoid confusion.
  - **Start and Due Dates:** Set the start and due dates for the assignment. This will allow students to know when they should begin and finish the assignment.
  - **Content:** Here is where you display the detailed content of the assigned task.
  - **Student Selection:** In this section, select the students to whom you will assign the task.

Class Library: It is a collection of educational resources and materials that the teacher uploads to RLP to enhance the class. These can include videos, images, documents (PDF, Word, PPT, etc.).

You can upload documents to the class library and then assign them to the students in the class as regular assignments by selecting the resource and clicking on **Assign Selected Content**.
